GLOBAL WARMING

THE EU EXISTING SITUATION

The situation on Global Warming in EU

Complew shift now affecting now affecting our planet's weather, climate system and more

GERMANY IS PART OF THE

Top 10

biggest emitters of carbon dioxide countries in the world

The situation on Global Warming in EU

Temperature rises

Drought and wildfire

Intense floods

The goals

- Cut greenhouse gas emissions
- Become climate-neutral
- Tax jet fuels and cut sales of petrol and diesel

Organisation and

European Green Deal

COP 21

IPCC

Policies and their problematics

EU Emissions trading system

Boosting renewable energy

Funding climate actions

POSSIBLE SOLUTION

impose consumption rates on raw materials and penalize all companies that do not respect these instructions.

Promoting renewable energy and energy efficiency in eu countries by creating regulations that will force them to use green energy at a certain rate

promoting recycling and establish structures that will be responsible for monitoring the proper use of waste.

increase protectionism

oblige EU countries which do not reduce their gas rate to increase their contribution to projects such as the European Green Deal or their financial contribution within the EU

CONSEQUENCES

Consequences of solutions

Expensive for the government
and for the population

Conflicts between UE members,
risk to bring protectionism

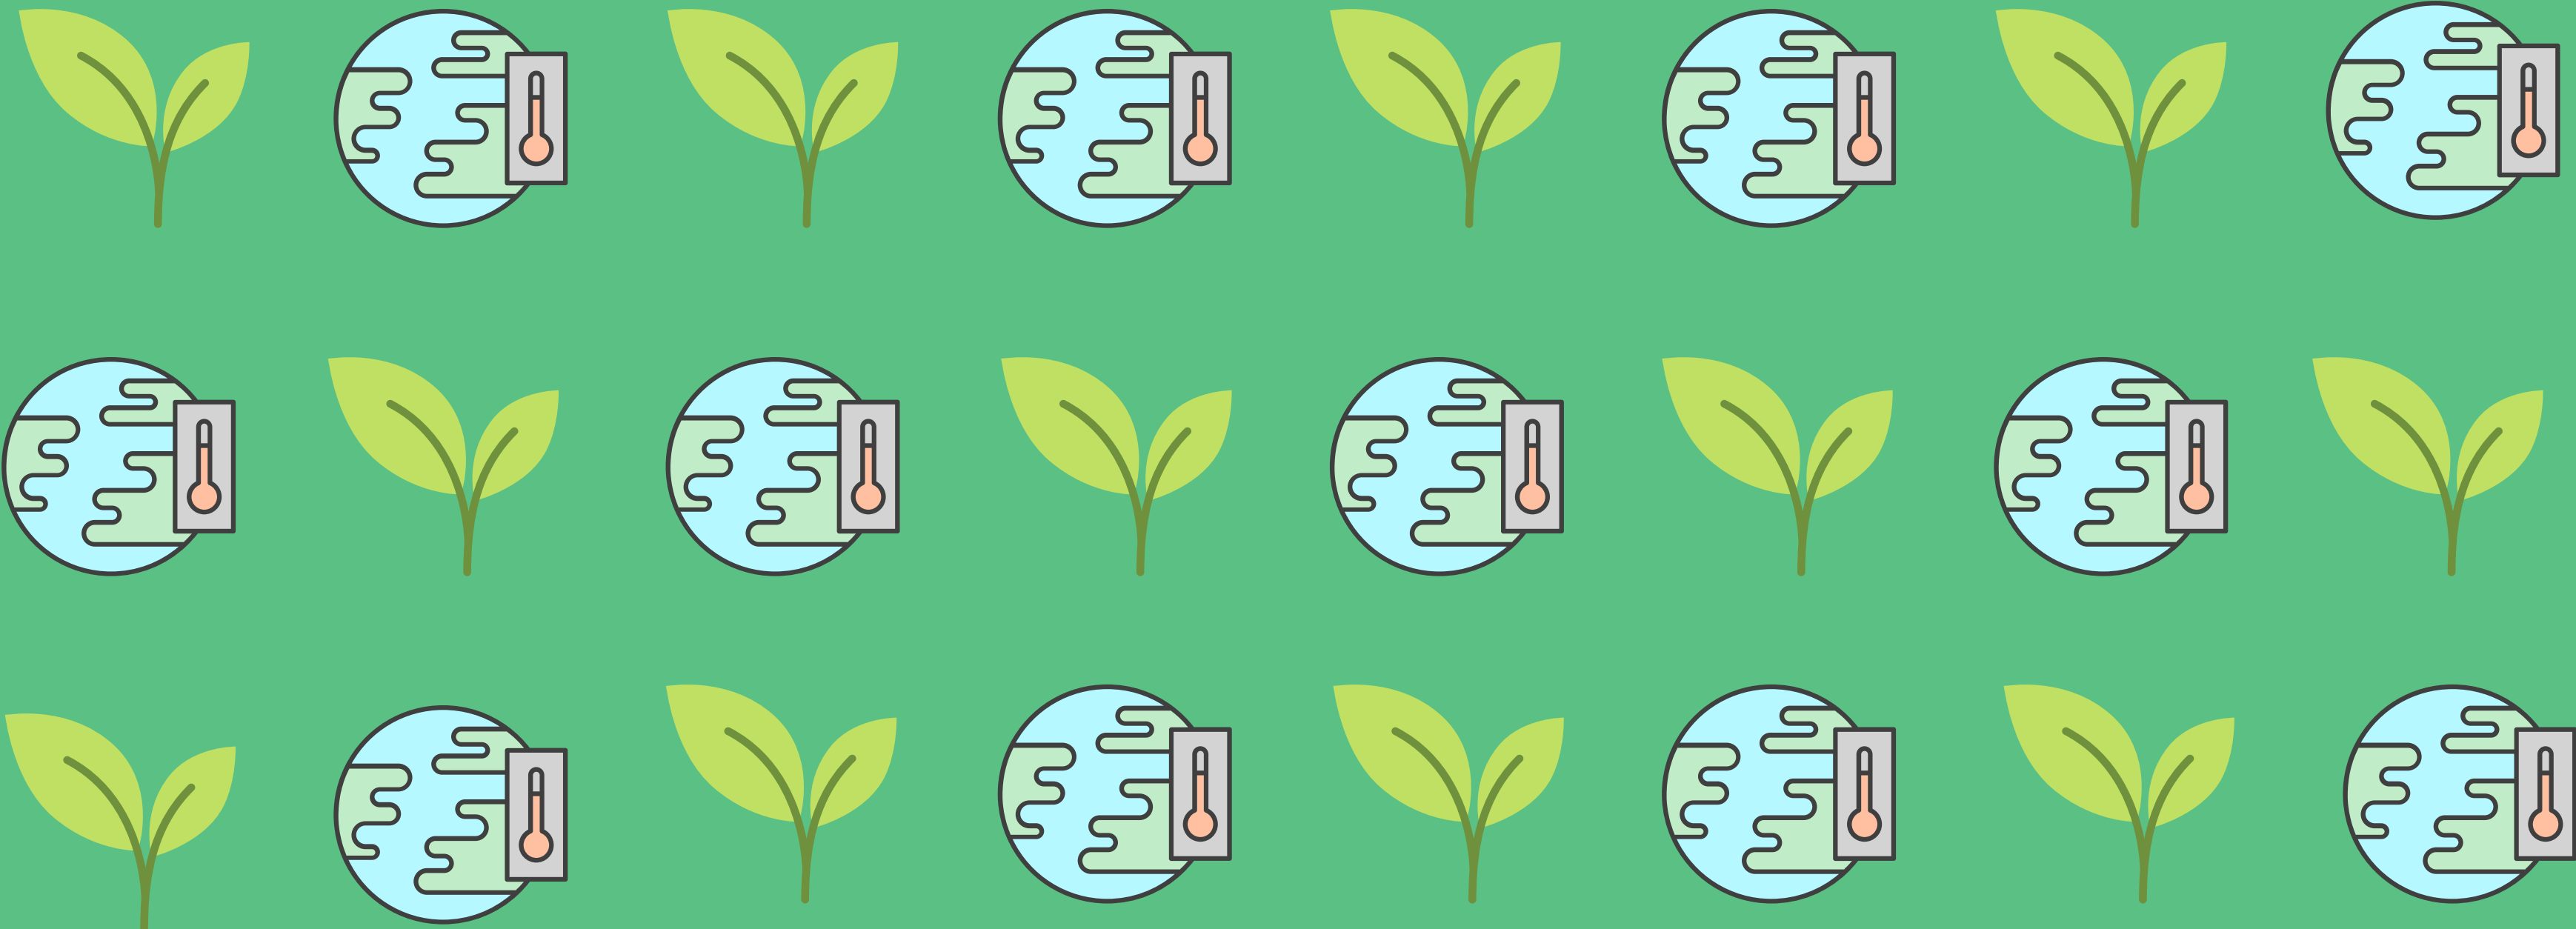

Consequences of solutions

Risk of growing inequalities
-imposing rate of use of forest
-population are growing so they
need more place

**Environemental change to a
better situation**

Conclusion
