- spirits: 2,1 billion
- beer: 700mio
- wine: 400mio

costs for national economy = **57.04 billion**

- direct costs - healthcare system (doctors, hospital, medication etc.): 16,59 billion
 - indirect costs - (inability to work, unemployment etc.): 40,44 billion
- 

ESSCALAND

- We are an island that has a booming apple growing economy
- Multiple big farms that can mass produce apples
- We concentrate on producing cider as it has less competition than beer, wine and spirits
- Cider is also a lower % alcohol than most other beers which should lead to less drinking accidents costing the taxpayer money

ESSCALAND

All other alcohol has high import taxes

Tax is linked with alcohol percentage:

Wine - 35%

Spirits - 60%

Beer - 40%

Cider - 75%

Also have high import tax on competitor cider to promote the consumption of our home made product

We become a reference and export our cider all over the world

We tax cider in our own country depending on the strength.
