Do you think that the use of ChatGPT can be unfair for the overall evaluation of students? Please explain why.

Isso pode ser desvantajoso se alguns o usam na íntegra por copiar collers e não são pegos, mas para aqueles que o usam como um motor de busca. Mas, no final, apenas aqueles que usam a versão paga são realmente beneficiados.

it's unfair if it's prohibited and some of the students still use it. or maybe unfair for the one who buy it and hae a better utilisation. otherwise i think it's not unfair

No i don't think so because everyone has access to Chatgpt (x5)

I don't think so, it is a tool like any other albeit a new one but it makes sense to learn how to use it and to encourage students to use it in the "correct" way as an inspiration and brainstorming tool more than a research and substitute for personal work

Yes because it's not based on the student's knowledges, and the students that are not using chat GPT are penalized. However, there are different ways to use chat gpt and it can be fair if everyone just don't copy and paste what is said.

All tools can be unfair if their usage may not be widespread. Yet, it is: would you say that it is unfair that a student uses a more advanced calculator than another one? Not really, you would concede an advantage, but not blatant unfairness.

No because we all have access to it. I think it's the role of the school to be able to punish if they think we have used it too much. Some students have chat gpt 4 so they can have advantages compared to us that only have the "free version" 3.5.

I think it can be unfair if all the work is done with chatGPT, without any thought behind it. However, if it only helps to understand the work or get a first idea, it may be right

Yes, lack of retention of the notions, lack of logic development. Difficult assument of skills

Yes it is unfair for those who uses original documents to do their work et do not choose the easy way (chat gpt)

Do you think that the use of ChatGPT can be unfair for the overall evaluation of students? Please explain why.

It's fair if everyone is allowed to use because knowing how to use technology is also a important skill for students. But if it's not allowed but someone use ChatGPT secretly, it's unfair.

yes I think this can distort the results. Some students may have an advantage over other students who would not use chat (or gemini)

No, because everybody can use this tool, its an equal tool to learn, and its easy to use well

We all have access to the same tool, you have to know how to use it intelligently

I think no, for me the use of ChatGpt is not unfair.

Yes, because some people don't know how to use them

No, everyone can use it (x2)

yes because the students that pay for ChatGPT 4 are advantaged.

Yes because the upgraded version GPT4.0 is \$25

Yes because some people use more than other

If it is used during an exam yes

It all depends on how they use it. If some use it to actually do their all work and the others only use it as an information source. Yes, because they are not evaluated on their capacity and their own production.

Yes, because the students don't use chatGPT for same reason, a part can use it for check informations and other can ask the question of an exam an copy-paste the answer chatGPT without thinking about their answer.

Do you think that the use of ChatGPT can be unfair for the overall evaluation of students? Please explain why.

No, for me it is part of the information research exercise.

Je ne pense pas que ça soit injuste dans le sens où tout le monde peut y avoir accès. Ensuite c'est chacun qui a sa propre responsabilité de faire confiance à Chat GPT ou non et d'approfondir ou non ses recherches via des sources plus fiables.

no because it's a new tools

Yes, it can. Depending on to what extent students use ChatGPT. Complete plagiarism could be unfair for some students, as it should be only used as references and or ideas.

Everyone can use chatGPT so it's not unfair. Moreover, chatGPT cannot do the totality of an evaluation.

I think that AI is part of the future so we'll all be using it in the next few years, so why schools want to slow down the progress so badly?

It is fair to use it as a source of information but it make it clearly unfair if people just use the answer of chatgpt as an answer then the amount of work and the graduation will be unequivalent.

Yes because some students are using it very often and obtain better grades while others spend a lot of time studying without ChatGPT

Yes because sometimes you don't even have an advantage by learning things by heart because you can have the same grade with no revision which means you don't lose time for the same result.

equality of access but people who not use it and have the same grade that those who use it, it can be unfair. So I think we should all learn to work with it.

Je pense que oui, mais si tout le monde à accès et peut l'utiliser, cela serait plus équitable.

I don't think so. I think that's a new tool that could be learn by everyone, and then become fair for everyone.

Do you think that the use of ChatGPT can be unfair for the overall evaluation of students? Please explain why.

Not if the exam condition place everyone at the same level without the use of AI, I think that this is a good tool for research and understanding topics without your professor.

I think yes but I think that you work for your knowledge and to acquire different competencies for your futur work and life

No, it's a tool that anyone can use, just like a calculator. Now we just need to learn how to use it properly.

They can get core ideas for their studies, but if they do copy and paste, I feel like it's unfair

Depends if everyone knows how to use properly.

I don't think so because everybody has access to ChatGPT but to me it is a bad idea.

yes I do, people which use chat GPT are advantaged and I understand that other people don't want ti use it

I don't think so, if everyone uses it that's not unfair

no, it's the evolution to be on the train you need to understand it and use it.

yes if people use it too much

Yes, because people don't make some researches or reflections anymore.

Do you think the use of ChatGPT has a positive or negative effect on your studies? (please be as detailed as possible)

Depende da maturidade do aluno, pois pode ser uma ferramenta

depend on how you use it. if you use it to do thing for you, it's bad. but if you use it to learn and prepare it is the best way you can use it

It depends, sometime i use it to do useless works that are too much long and that are for me pointless and not graded. But for what remains i would say that it help a lot to have access to informations and explanation

Je pense que ça a un mauvais impact sur nos études car nous n'apprenons plus a faire des recherches a consulter différentes sources et donc a apprendre en faisant. Avec Chatgpt on a la réponse servit sur un plateau et on n'apprend moins.

it depends, for research it's very useful. However for making interpretations, analysis and calculating it makes us less thinking and training less our brain.

The main advantage is the fact that we can succes our basic task faster and the drawback is the fact that we are more passive and we reflect less

It is mostly positive as it is a very powerful and fun tool to use, but it can have negative effects if used incorrectly, mostly by "doing the thinking in lieu of the student" and therefore hurting the learning curve

It can help a lot to understand some stuff in the course. If you don't manage to find relevant informantion on internet, chat gpt can help you to get the main idea on a subject. Cependant, cela renforce aussi la procrastination et nous empêche de réfléchir de nous-même si l'utilisation de l'IA devient trop importante.

Very useful, can make up with the lack of pedagogy (or willingness?) shown by some professor. Helps with understanding complex concepts and get valuable insight. The fact that it is flexible means it can be used for many critical objectives (creating MCQ, rewriting lesson, and overall acting like a tutor in foreign language).

Do you think the use of ChatGPT has a positive or negative effect on your studies? (please be as detailed as possible)

Both. Negative because we think less by ourselves but it can be useful to understand globally the subject of a presentation or a document and to guide us.

ChatGPT has a positive effect on my study because it can help me to understand well a specific subject, to better understand a question, or to help me for structure a presentation or report (like a plan for example).

I think this has a negative impact on our studies because it encourages us less to think, to take the easy route and to have less critical thinking like before

Positive it helps me to be much more productive on any works. He his very precise and relevant. It works like a tutor. It ease a lot my exam preparation thanks to great pedagogical methods & tool

I think it has a negative impact in our studies because i know that some people do not even know what they are saying when using chat gpt. For example, students use sometimes chat gpt for their oral presentation and just read what they took on chat gpt and it's not even relevant. But with a good utilization of chat gpt it could really help students like for example to summarize a text or a document that is very very long, it can reduce time.

From the aspect of efficiency, it's very positive because it saves a lot of time of reading and understanding. But it also destroys my patience to read long article and I could not concentrate on my textbook or paper like before. From this point of view, it's negative.

I think this has a negative impact because the answers can appear immediately thanks to chat and it doesn't force us to think as we should.

Positive, its can help me to go further. I can do in five minutes the first step of a work that would have take me 1hour before. Negative, because i know that im loosing some autonomy and some critical thinking

positive because it is an excellent work tool that helps to understand, learn and work. It can be bad if used without thinking

Positive effect for me because it can help to study

Do you think the use of ChatGPT has a positive or negative effect on your studies? (please be as detailed as possible)

It has negative effects, that's why I don't use it too often to not become "un assisté"

Both, it permits me to work smarter and faster, then in another way it makes me be lazy, and now I don't arrive to work by myself.

positive impact to find ideas but negative impact because you think less

both it's easier to be lazy but sometime it can help

postive, better understanding of various subject

For me this is positive because it is more faster and more easily to found informations.

Both. Negative because people become lazy. Positive because it brings more knowledge

I can't really answer, On one hand, it has a positive effect because it allows me to better understand some concepts, find information, or synonyms, to higher quality writing. On the other hand, I personally don't use it to do a writing all by itself and then submit it, or answering my exams question. Which makes the ones that are doing it cheater because they might have a better grade than me even if they clearly worked less.

Negative, because chatGPT encourage students to not found by themselves the document and improve laziness to work.

Positive

Pour moi ça un aspect positif car ça me permet d'approfondir mes recherches et de mieux me guider dans la rédaction. En effet, j'utilise l'IA comme un moyen d'avoir des idées, de dresser un plan de rédaction et d'organiser les thèmes que je vais traiter, pour ensuite trouver des informations fiables via des recherches internet plus "classiques". C'est donc un moyen de pousser la réflexion plus loin, là où j'aurais peut-être pas osé ou là où je n'aurais pas pensé à aller faire mes recherches.

positive but you have to know how to use it

Do you think the use of ChatGPT has a positive or negative effect on your studies? (please be as detailed as possible)

positive but you have to know how to use it

Again it depends on how students utilize it. Personally, for me, it has been a positive experience, it helps me in generating ideas and collecting information.

chatGPT is a tool that can help student in their comprehension of a topic.

I think it could have a negative effect on the studies if the students use it too much without any reflexion

Neither one nor the other,

It's part of technological progress and part of the world, so I don't see the point in holding back progress.

Positive effect on my study because I gain time since ChatGPT makes the researches and analyse for me all the source of info for me. But I want Essca to put us on a blocked platform that we can not go out off during the test online so we can't make research at the same time. But for paper to send or presentation we have to use it at the right proportion by ourselves.

Both. It can have a positive effect. For example for research or information. But it leads to a lack of knowledge

It has a positive impact because you gain a lot of times, but a negative one because if you work on a computer you will put everyone on the same level

Yes especially for youngest generations because they will lose their faculties of redaction and I think it's really important for everything.

L'utilisation de ChatGPT peut avoir un effet positif sur nos études si nous l'utilisons à bon escient. Il peut nous permettre de trouver les informations plus rapidement. En revanche, il peut avoir un effet négatif sur nos capacités rédactionnelles.

Positive : - can help to understand complex subject, make it easier. Negative : - you may learn less, because a lot of things can be done by IA

Do you think the use of ChatGPT has a positive or negative effect on your studies? (please be as detailed as possible)

can be both but it is good if well used, for exemple, if you use it for researches and gathering knowledge or understanding a complicated topic then you have a good use of it. By the way if you don't search by yourself and simply ask the AI to make your own work, then it is a bad use since you don't read any of the ressources ESSCA gives and moreover you don't ask you brain to work further than 3 click. The good use of AI is to use it as a tool on the side and I really think it is as useful as when the calculator or google came out but you have to work with it and not make it work for you as your digital slave.

I think both. Positive with the wide availability of the information. Negative because sometimes we didn't take the time to search and take time to write an essay or a report

Slightly negative, because some people can use it without even reading it

Sometime positive effects, cuz we can use it for understanding the subject better and faster and sometime negative effects, if we use it for just copy and paste

For me it has a positive effect on my studies because it push me to be more curious and to think outside of the box, however the temptation of using it to do everything for me it's still here but in my opinion there is no point in doing so since it doesn't bring anything to us.

It can be positive because we gain time and can learn more things in less time but it can be negative because we don't do the effort of research and it didn't train our brain.

I think it has both effect, positive and negative. It is useful for training for an exam and to find information quickly but it is tempting to use it to easily to do the homework.

It can have a negative impact but if it's just to help you then it's okay, but you have to use it carefully.

I think both, it help to increase the quality of the text but can give you a objective response but not a subjective.

it could be positive if people are using it in the good way and if the evalutation are mooving to a way that couldn't allow the bad use of chat gpt

Negative effect for the same as the previous question
